MARKET PULSE — Weekly Trading Report

Sunday 07 June 2026

OUTLOOK · NEUTRAL-BEARISH

MACRO THEME

NFP May +172K (consensus 85K) delivered a seismic USD shock on June 6. NAS100 crashed -4.77% from ATH 30,762 to 28,957. Gold broke below 4,400 (low 4,336). US30 hit new ATH 51,660 before reversing. BoC June 10 and ECB June 11 are binary catalysts for the week ahead.

OVERVIEW

Hot NFP reshaped the market landscape in a single session. NAS100 lost its entire ATH-to-close rally of +6.2% in one day as the Fed higher-for-longer narrative was reinforced. US30 was more resilient given its blue-chip composition. Silver crashed -8.6% on the week. AUDUSD broke below 0.7100. The GER40 short trade (entry 25,000, June 4) is open and +241 points in profit. Three binary central bank events follow: BoC June 10 (2.25%, 35-40% cut probability), ECB June 11 (2.00%, 35% hike probability), FOMC June 16-17 (hawkish hold near-certain). RBA June 15-16 (4.35%, hold consensus) is the AUD catalyst. US CPI May (June 9) is the first test.

TOP CONVICTION TRADES

#1 XAUUSD SHORT		
ENTRY	TARGET	STOP
4,430-4,460	4,300	4,515
NFP +172K (nearly double 85K consensus) eliminated any 2026 Fed cut expectations. Broken support 4,447 (May 27 close) and 4,400 round number both now act as resistance. FOMC June 16-17 formal hawkish reiteration is an additional downward catalyst. Entry zone sits within the broken support cluster. ECB hike scenario (35%) would provide a temporary bounce toward entry — use as the trigger. Risk-reward 1:2.1 from mid-entry.		

#2 GER40 SHORT		
ENTRY	TARGET	STOP
24,900-24,950	24,400	25,100
Continuation of active short from 25,000 (June 4 entry, currently +241 points). Broken 25,000 pivot confirmed as resistance (June 4 high 25,009 = original entry trigger). ECB June 11 binary: 35% hike probability accelerates trade to 24,400 and below; hawkish hold (65% probability) maintains 24,607 primary target. Eurozone Composite PMI 47.5 (29-month low) = stagflation backdrop. Risk-reward from new entries at 24,925: 1:3.0.		

#3 NAS100 SHORT		
ENTRY	TARGET	STOP
29,300-29,600	28,500	30,100
Structural break confirmed below 30,001 (May 26 support) and 29,481 (May 22 support). Both now resistance. Prior BULLISH thesis invalidated; prior long stopped out on NFP gap-down June 5. Fed higher-for-longer validated by NFP = NAS100 multiple compression. CPI May June 9 is the binary: hot CPI = trade accelerates without the bounce; soft CPI = 29,300-29,600 dead-cat entry zone activated. Avoid chasing Monday open. Wait for the bounce. Risk-reward 1:1.6 from mid-entry.
